SMARTER DISTRIBUTION | COMPLETE SOLUTIONS

# Custom Fabricated Warehouse Safety Products

## Warehouse & Pallet Rack Safety Products Manufactured Right Here!

The E-Distribution team has spent decades designing and installing warehouse storage systems in manufacturing and distribution facilities. Seeing firsthand the durability and safety needs of our customers, it made perfect sense that fabricating safety products in our own steel fabrication shop was the next logical step. Fabricating these critical warehouse accessories in-house ensures that we provide the most functional and economical products to meet the needs of our customers.

Our steel fabrication shop manufactures custom-designed safety products to protect pallet racking and systems, warehouse equipment, inventory and employees. Check out our product offerings and then give us a call to discuss your facility needs.

### Built-In Safety Product Advantages

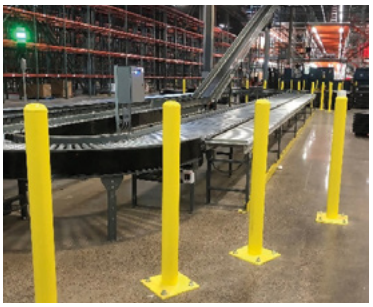

- Guaranteed quality & durability
- Custom-fit to your application needs
- Fabrication & freight savings
- Increased warehouse safety
- Reduced racking & product damage

### E-Distribution Safety Products

- Safety Bollards
- Safety Guardrail
- Stairs & Safety Handrail
- Floor Safety Angle
- End of Rack Protection
- Conveyor Bridge Protection
- Safety Netting

# Custom Designed Safety Products

## Safety Bollards

Bollards protect goods and equipment inside or outside your facility while allowing foot traffic to pass through. They are also useful for indicating traffic flow at doorways, docks and offices or break rooms.

**Specs:** Heavy-duty, structural steel pipe. 4.5" O.D. with 3/4" anchors and 1/2" thick baseplates. Powder coated Safety Yellow; other colors/custom options available.

**Surface mount options include**: Custom anchor on top of concrete or core drill (special pricing). Standard surface mount heights - 24", 36" or 42" with custom heights available.

## Safety Netting

An easy, affordable added protection measure, safety netting prevents inventory or debris from falling through the pallet rack. Nylon rack safety netting is typically installed across a wide span of pallet rack at the higher elevations. Heavy-duty wire mesh panels are also available.

## Safety Guardrail

Guardrails are frequently used throughout the warehouse to prevent material handling vehicles from damaging storage rack, building columns, mezzanine supports, equipment, and personnel.

**Specs:** Heavy-duty, structural steel pipe. Standard bolt down on top of concrete or core drilled into floor to secure. Powder coated Safety Yellow; other colors/custom options available.

## Stairs and Safety Handrail

Safety handrails are a necessity in the warehouse. E-Distribution manufactures sturdy handrails for mezzanines, stairs, and personnel walkway areas.

**Specs:** Welded steel rails. Face-mount on mezzanines or deck-mount to the floor. Powder coated Safety Yellow; other colors/custom options available. Stairs - OSHA and IBC design.

## Floor Safety Angle

Floor angle guides provide visual guidance and prevent structural damage to walls, curbs, ends of rack and more from forklift impacts.

**Specs:** Heavy-duty structural steel. Available in a variety of standard sizes or customize to meet your needs. Secured to concrete floor. Powder coated Safety Yellow; other colors/custom options available.

## End of Rack Protection

Protect rack where it is most vulnerable to forklift impact with heavy-duty end row guards.

**Specs:** Steel angle or steel channel guards available. Bolt onto existing rack. Standard lengths - 42" and 48", custom lengths available. Powder coated Safety Yellow; other colors/custom options available.
